Warranty, Service, Repair, and Return Policies and Instructions

The information contained in this document supersedes all similar information that may be found elsewhere in this manual.

Total Customer Satisfaction – PCB Piezotronics guarantees Total Customer Satisfaction. If, at any time, for any reason, you are not completely satisfied with any PCB product, PCB will repair, replace, or exchange it at no charge. You may also choose to have your purchase price refunded in lieu of the repair, replacement, or exchange of the product.

Service – Due to the sophisticated nature of the sensors and associated instrumentation provided by PCB Piezotronics, user servicing or repair is not recommended and, if attempted, may void the factory warranty. Routine maintenance, such as the cleaning of electrical connectors, housings, mounting surfaces with solutions and techniques that will not harm the physical material of construction, is acceptable. Caution should be observed to insure that liquids are not permitted to migrate into devices that are not hermetically sealed. Such devices should only be wiped with a dampened cloth and never submerged or have liquids poured upon them.

Repair – In the event that equipment becomes damaged or ceases to operate, arrangements should be made to return the equipment to PCB Piezotronics for repair. User servicing or repair is not recommended and, if attempted, may void the factory warranty.

Calibration – Routine calibration of sensors and associated instrumentation is

recommended as this helps build confidence in measurement accuracy and acquired data. Equipment calibration cycles are typically established by the users own quality regimen. When in doubt about a calibration cycle, a good "rule of thumb" is to recalibrate on an annual basis. It is also good practice to recalibrate after exposure to any severe temperature extreme, shock, load, or other environmental influence, or prior to any critical test.

PCB Piezotronics maintains an ISO-9001 certified metrology laboratory and offers calibration services, which are accredited by A2LA to ISO/IEC 17025, with full traceablility to N.I.S.T. In addition to the normally supplied calibration, special testing is also available, such as: sensitivity at elevated cryogenic temperatures, phase extended response, high frequency response, extended range, leak testing, hydrostatic pressure testing, and others. For information on standard recalibration services or special testing, contact your local PCB Piezotronics distributor, sales representative, factory customer service representative.

Returning Equipment – Following these procedures will insure that your returned materials are handled in the most expedient manner. Before returning any equipment to PCB Piezotronics, contact your local distributor, sales representative, or factory customer service representative to obtain a Return

Materials Authorization (RMA) Number. This RMA number should be clearly marked on the outside of all package(s) and on the packing list(s) accompanying the shipment. A detailed account of the nature of the problem(s) being experienced with the equipment should also be included inside the package(s) containing any returned materials.

A Purchase Order, included with the returned materials, will expedite the turn-around of serviced equipment. It is recommended to include authorization on the Purchase Order for PCB to proceed with any repairs, as long as they do not exceed 50% of the replacement cost of the returned item(s). PCB will provide a price quotation or replacement recommendation for any item whose repair costs would exceed 50% of replacement cost, or any item that is not economically feasible to repair. For routine calibration services, the Purchase Order should include authorization to proceed and return at current pricing, which can be obtained from a factory customer service representative.

Warranty – All equipment and repair services provided by PCB Piezotronics, Inc. are covered by a limited warranty against defective material and workmanship for a period of one year from date of original purchase. Contact PCB for a complete statement of our warranty. Expendable items, such as batteries and mounting hardware, are not covered by warranty. Mechanical damage to equipment due to improper use is not covered by warranty. Electronic circuitry failure caused by the introduction of unregulated or improper excitation power or electrostatic discharge is not covered by warranty.

Contact Information – International customers should direct all inquiries to their local distributor or sales office. A complete list of distributors and offices be found at www.pcb.com. Customers within the United States may contact their local sales representative or customer factory service representative. A complete list of sales representatives can be found www.pcb.com. Toll-free telephone numbers for a factory customer service representative, in the division responsible for this product, can be found on the title page at the front of this manual. Our ship to address and general contact numbers are:

SENSORS AND INSTRUMENTATION FOR MACHINE CONDITION MONITORING

Introduction

displacement of the machinery. Ideal for monitoring the vibration of process equipment such as low rotation speed fans, motors and pumps, the output of the sensor is used for process control or predictive maintenance and a 4-20mA vibration transmitter. The sensor outputs a 4-20mA signal that is proportional to the overal The Model 653A Series Industrial 4-20mA Sensors combine the capabilities of a piezoelectric vibration sensor

General Features

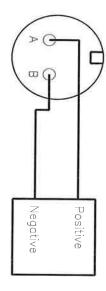

- Imbedded Piezoelectric Accelerometer for improved accuracy and frequency response
- Vibration range in Displacement.
- Allows for continuous vibration monitoring of critical applications.
- Reduces sophisticated vibration analysis requirements
- Readily interfaces to existing process control and predictive maintenance equipment.
- Rugged stainless steel construction for applications in harsh environments
- Flexible design allows for various custom requirements.

Operation and Wiring

Standard Wiring

supply to Pin A or **Red** wire on the sensor and the negative (-) input from the power supply to Pin B or **Blue** wire compatible with other IMI loop powered units we recommend to attach the positive (+) input from the power of the sensor. The Model 653A Series operates from a standard 2-wire, 4-20mA loop. Unit is non-polarity sensitive, but to be

Figure 1 – wiring: loop powered

If using a standard DC power supply, install either an ammeter and/or load resistor in line with the output, Pin B or

The resistor in a loop will generate a DC voltage that is proportional to current by:

$$V = IR$$

If
$$R = 250$$
 ohms and $I = 6$ mA, then $V = 1.5$ VDC

Note:

- Resistor value must be less than: (Vsupply 12) x 50.
- For integral cable sensors: RED wire is positive, BLUE wire is negative.

Taking Measurements

When measuring the current output from the unit, use the following formula to calculate the vibration level:

Vibration Output mils, pk-pk = (Measured Output mA – 4mA) x (Full Scale Vibration Output mils, pk-pk /16mA)

20	16.0	12.0	8.00	4.00	Measured mA
40.0 mils, pk-pk	30.0 mils, pk-pk	20.0 mils, pk-pk	10.0 mils, pk-pk	0.0 mils, pk-pk	Vibration Output

Installation

the frequency response is limited to 300 Hz on the 653A, any of the four methods can be used without seriously When choosing a mounting method, consider closely the advantages and disadvantages of each technique affecting the data values. Typical mounting types are stud, direct adhesive, adhesive mounting base and magnetic mounting base. Since

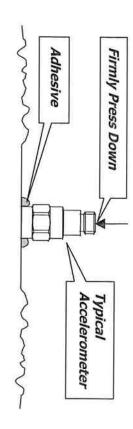

Direct Adhesive Mount Procedure

For restrictions of space or for convenience, most sensors (with the exception of integral stud models) can be adhesive-mounted directly to the machine surface

works best STEP 1 Prepare a smooth, flat mounting surface. A minimum surface finish of 63 µin [0,00016 mm] generally

assembly to displace any adhesive. Be aware that excessive amounts of adhesive can make sensor removal STEP 2 Place a small portion of adhesive on the underside of the sensor. Firmly press down on the top of the difficult.
