

MINIATURE ELECTRODYNAMIC INERTIAL SHAKER MODEL 2002E

The 2002E Miniature Electrodynamic Inertial Shaker is a compact and lightweight force generator whose construction makes it well-suited for modal testing as well as a variety of general vibration testing applications.

The generator has a single 0.141 in (3.6 mm) diameter mounting through-hole and a rugged internal suspension system that eliminates test fixture requirements for most testing applications. Miscellaneous mounting screws are supplied to facilitate installation of the unit, either directly to the test

structure or through a force sensor. The 2002E can be operated in any orientation and is therefore easily positioned for modal or general excitation applications offering optimal force performance over a wide 20 Hz to 3000 Hz frequency range.

A unique inverted armature coil design and the latest composite materials combine to offer excellent axial compliance and high lateral stiffness, ensuring reliability and robustness. When the 2002E is combined with a power amplifier and a piezoelectric force sensor (or impedance head) from PCB Piezotronics, Inc., the system becomes an ideal, compact force generator for driving point modal excitation or general purpose vibration excitation with unmatched reliability, performance and cost.

BENEFITS:

- Compact size allows easy set-up for difficult-to-access locations
- 2 lbf (9 N) sine force excitation
- Direct mounting requires no special fixturing support or manual alignment
- In-line fuse for overcurrent protection
- Wide frequency range from 20 Hz to 3000 Hz
- Compatible with piezoelectric force transducers and shaker amplifiers

APPLICATIONS:

- General vibration testing and structural excitation
- Impedance measurements
- Experimental modal analysis
- Educational laboratory research

MODEL 2002E

The compact design and portability make the 2002E Miniature Electrodynamical Inertial Shaker a very versatile, accessible and popular solution for test and instrumentation engineers. It is ideally suited for general purpose vibration testing for experimental modal, academic, biomedical or laboratory research.
